

Recording Status by Detector

Ordered by success rate (highest to lowest)

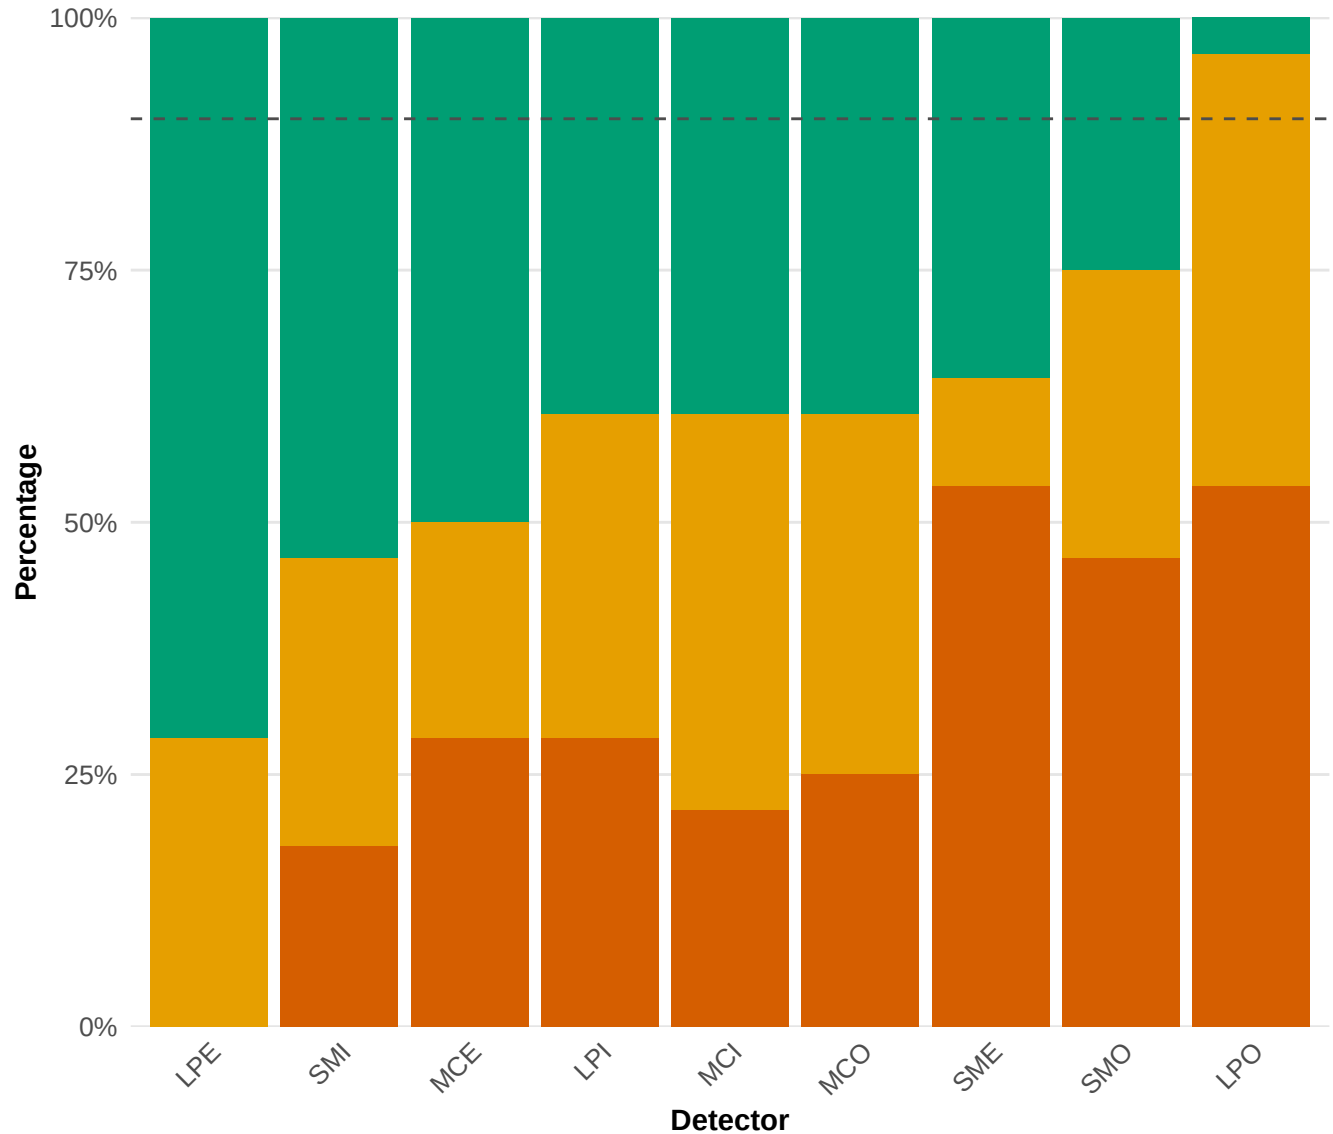

Status ■ Success ■ Partial ■ Fail

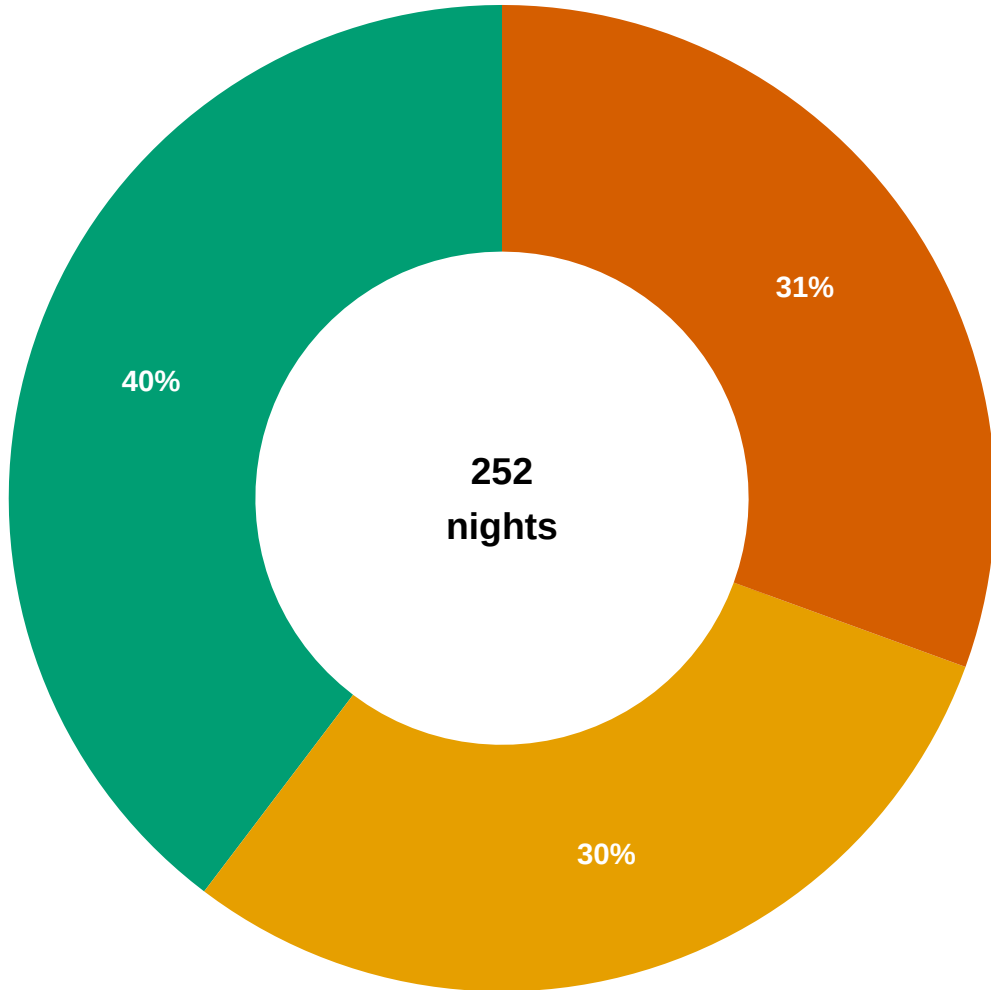

Recording Status Breakdown by Detector

Dashed line = 90% threshold

Status Success Partial Fail

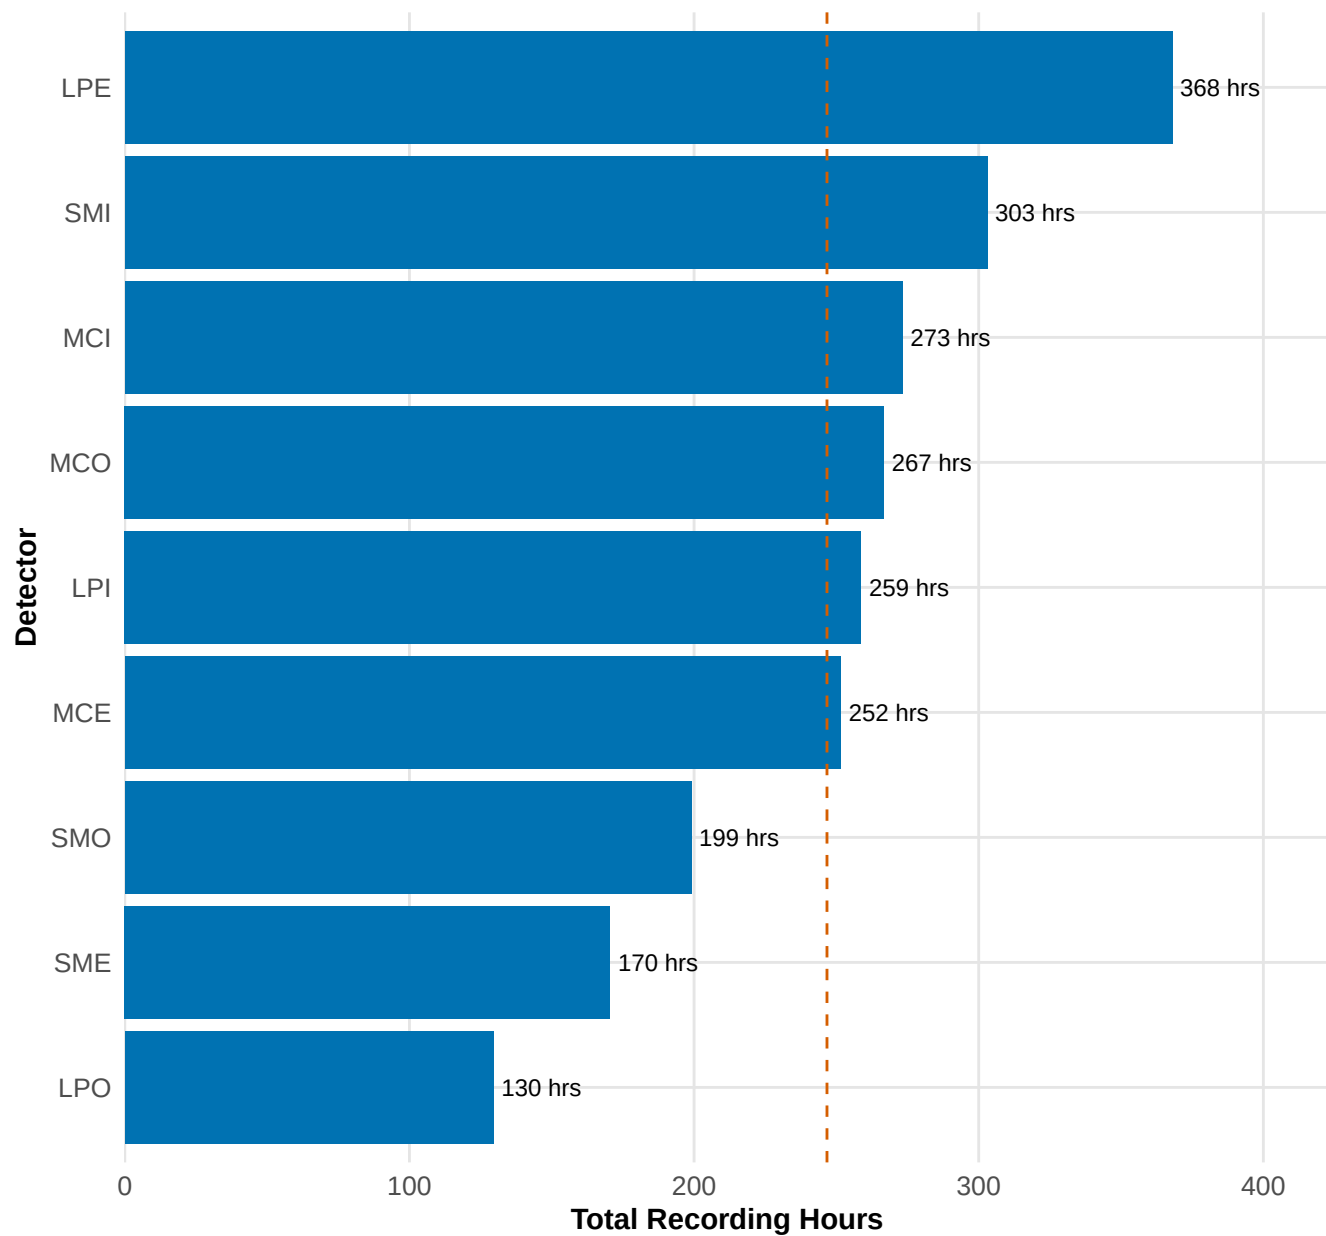

Overall Recording Status

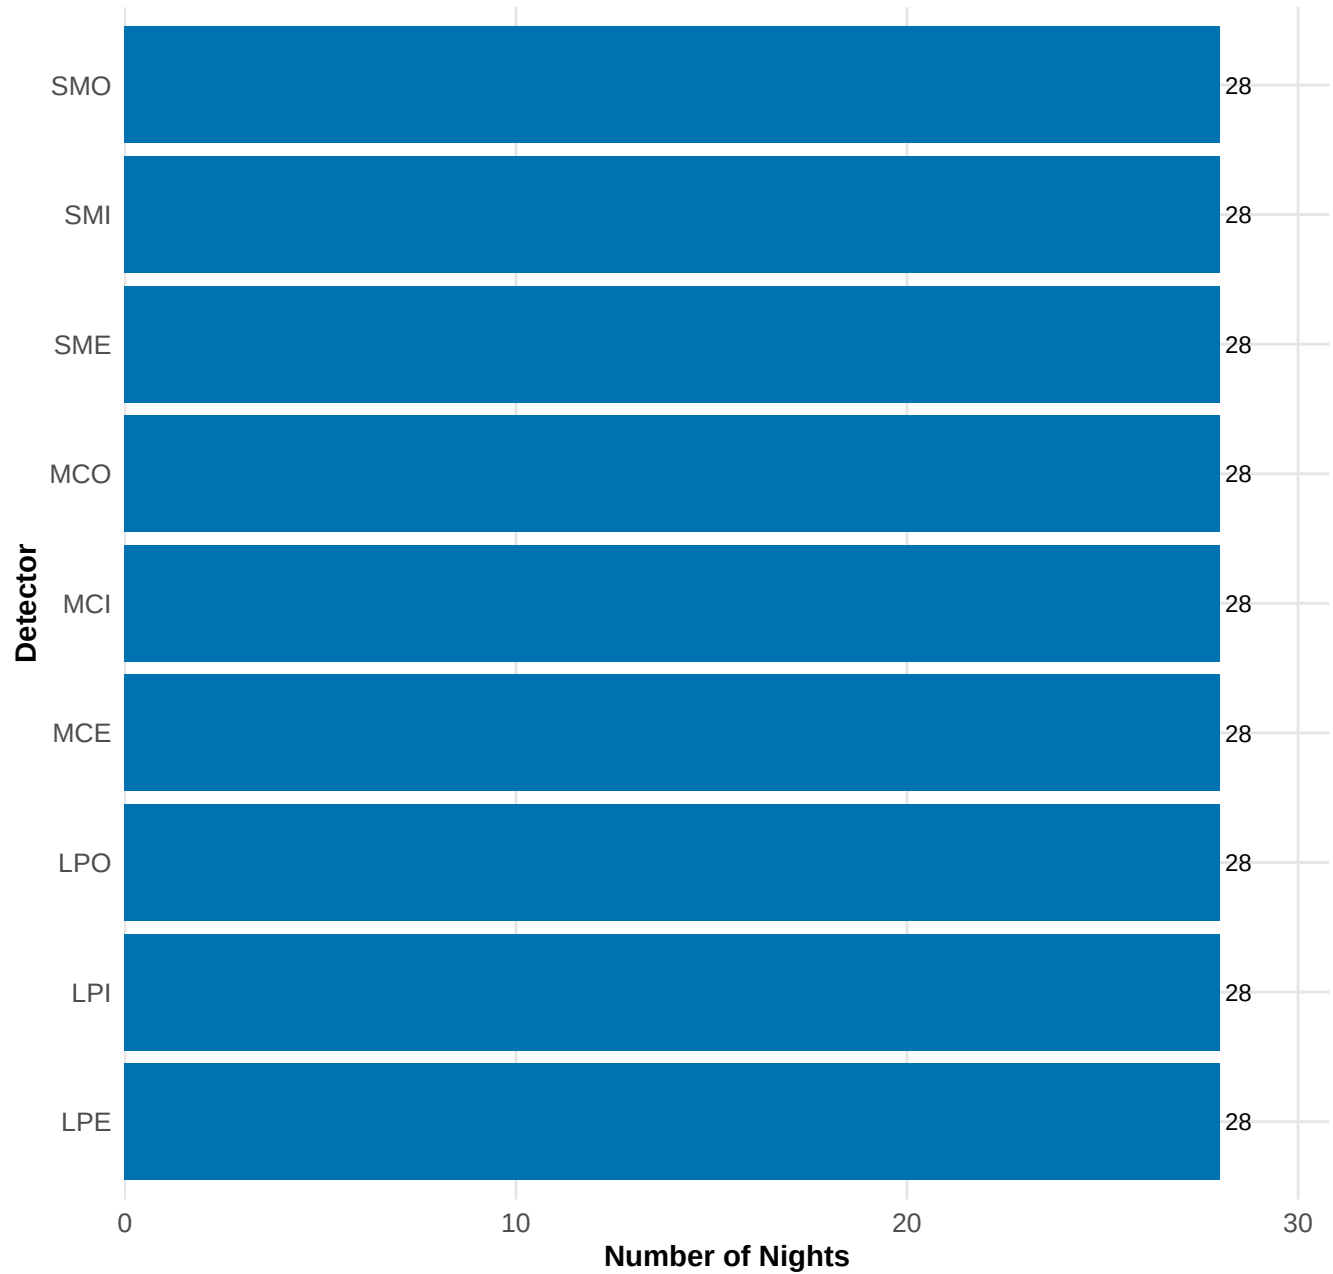

Status ■ Success ■ Partial ■ Fail

Total Recording Effort by Detector

Dashed line = study mean (247 hrs)

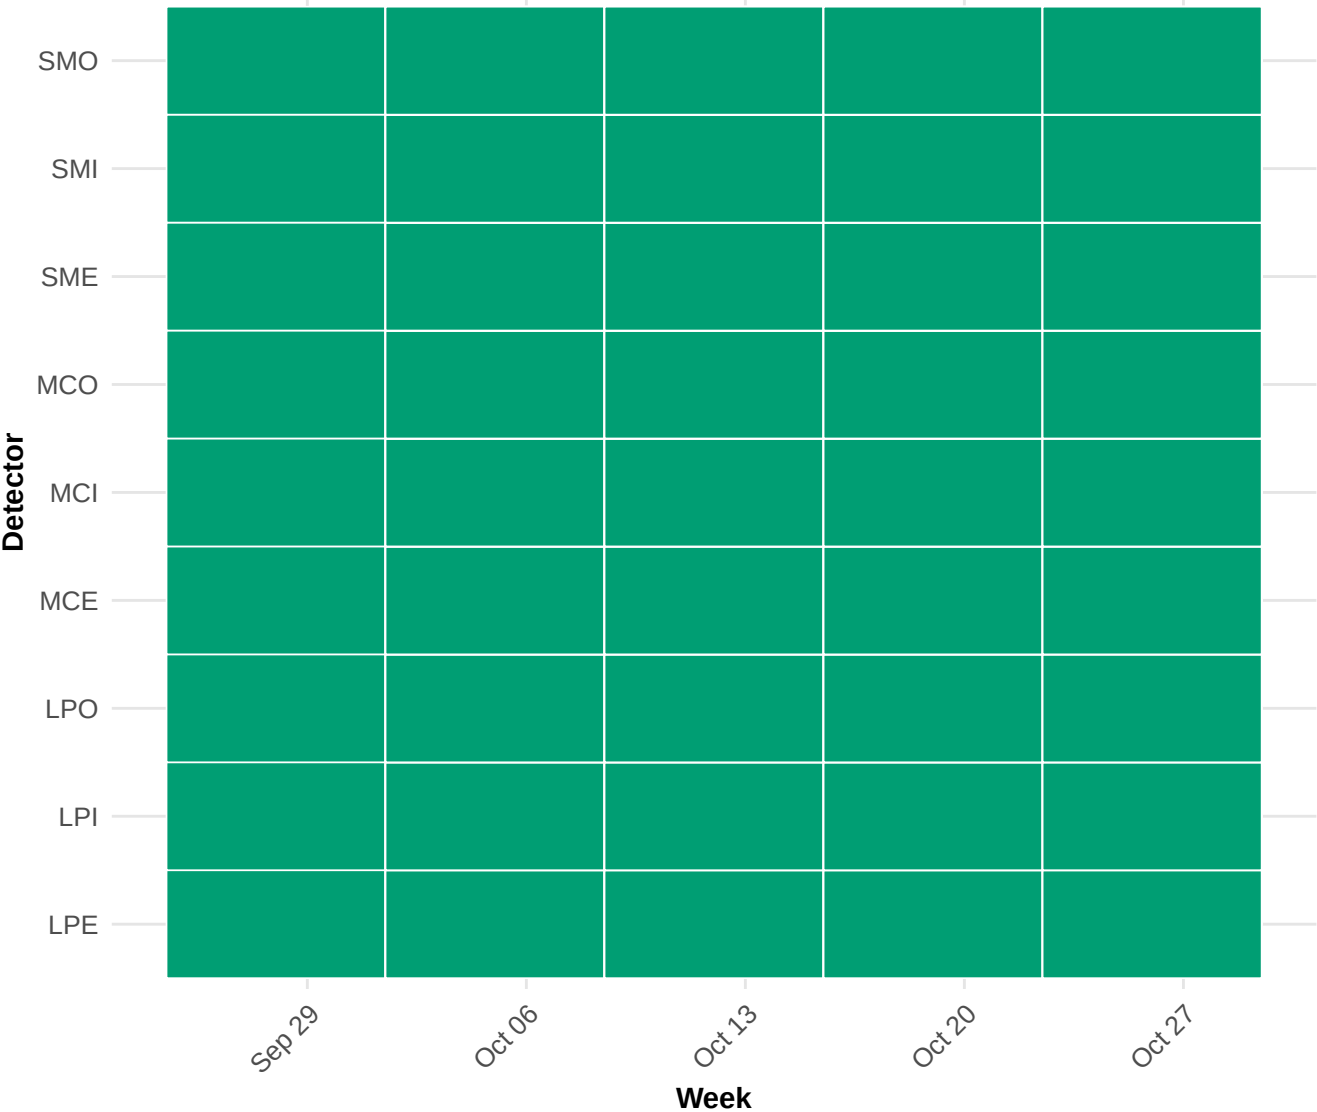

Recording Nights by Detector

Data Completeness by Detector

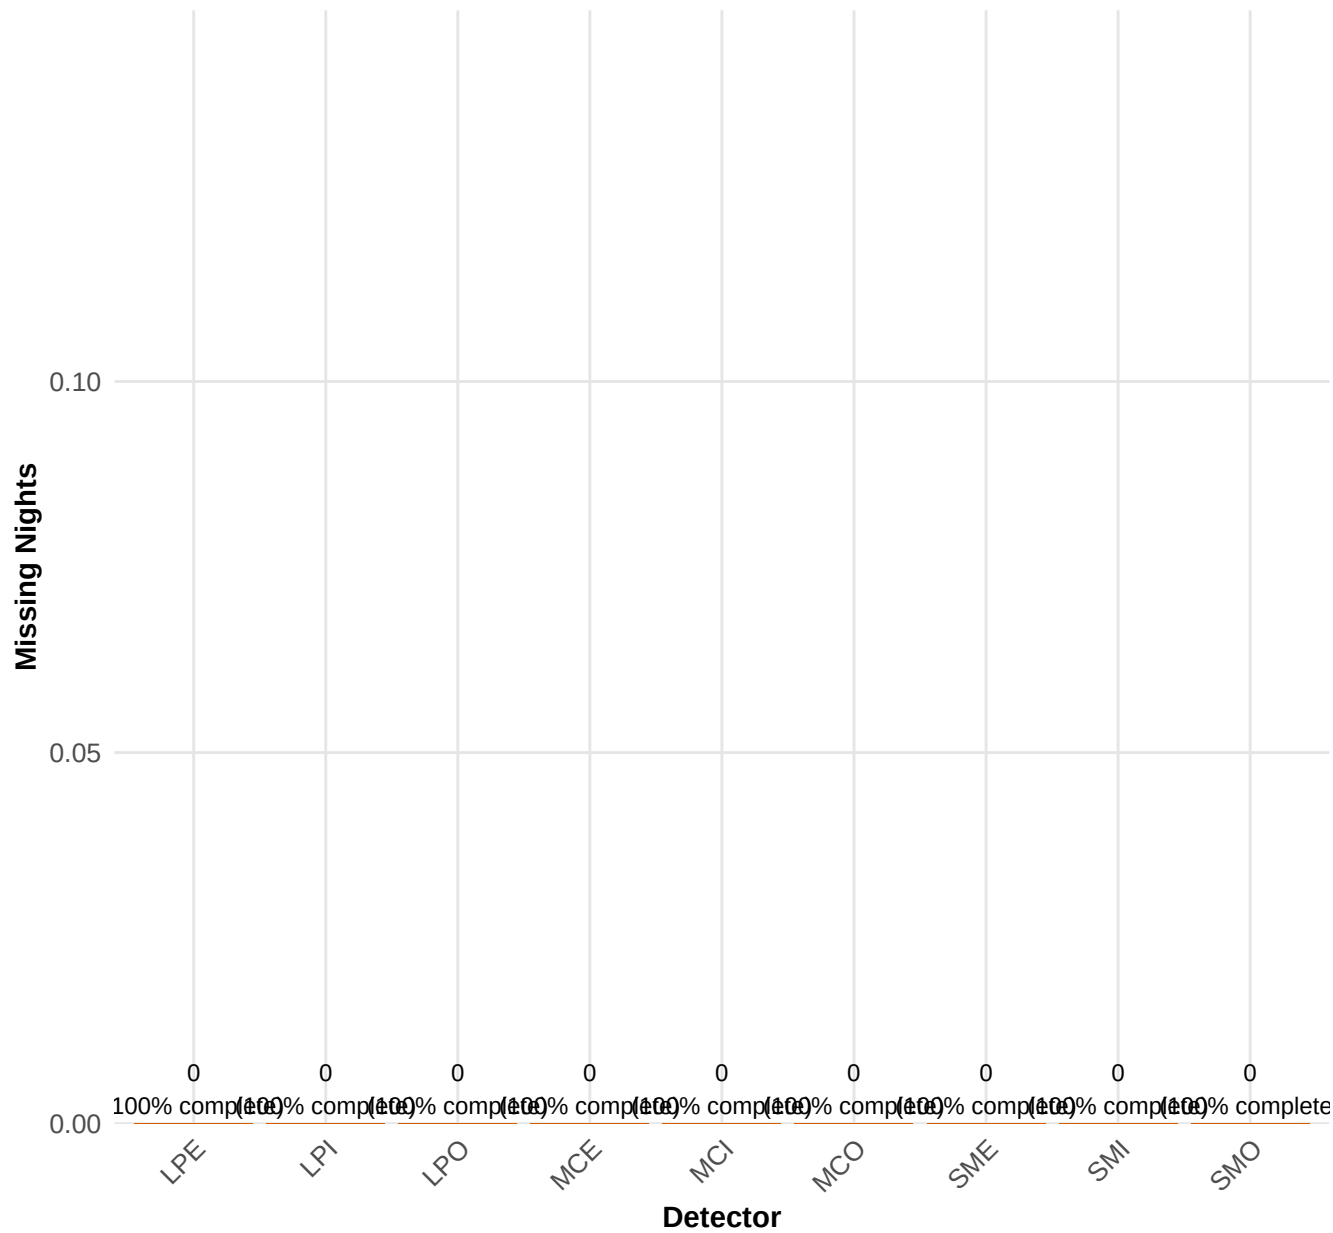

2025-10-04 to 2025-10-31

Data Missing

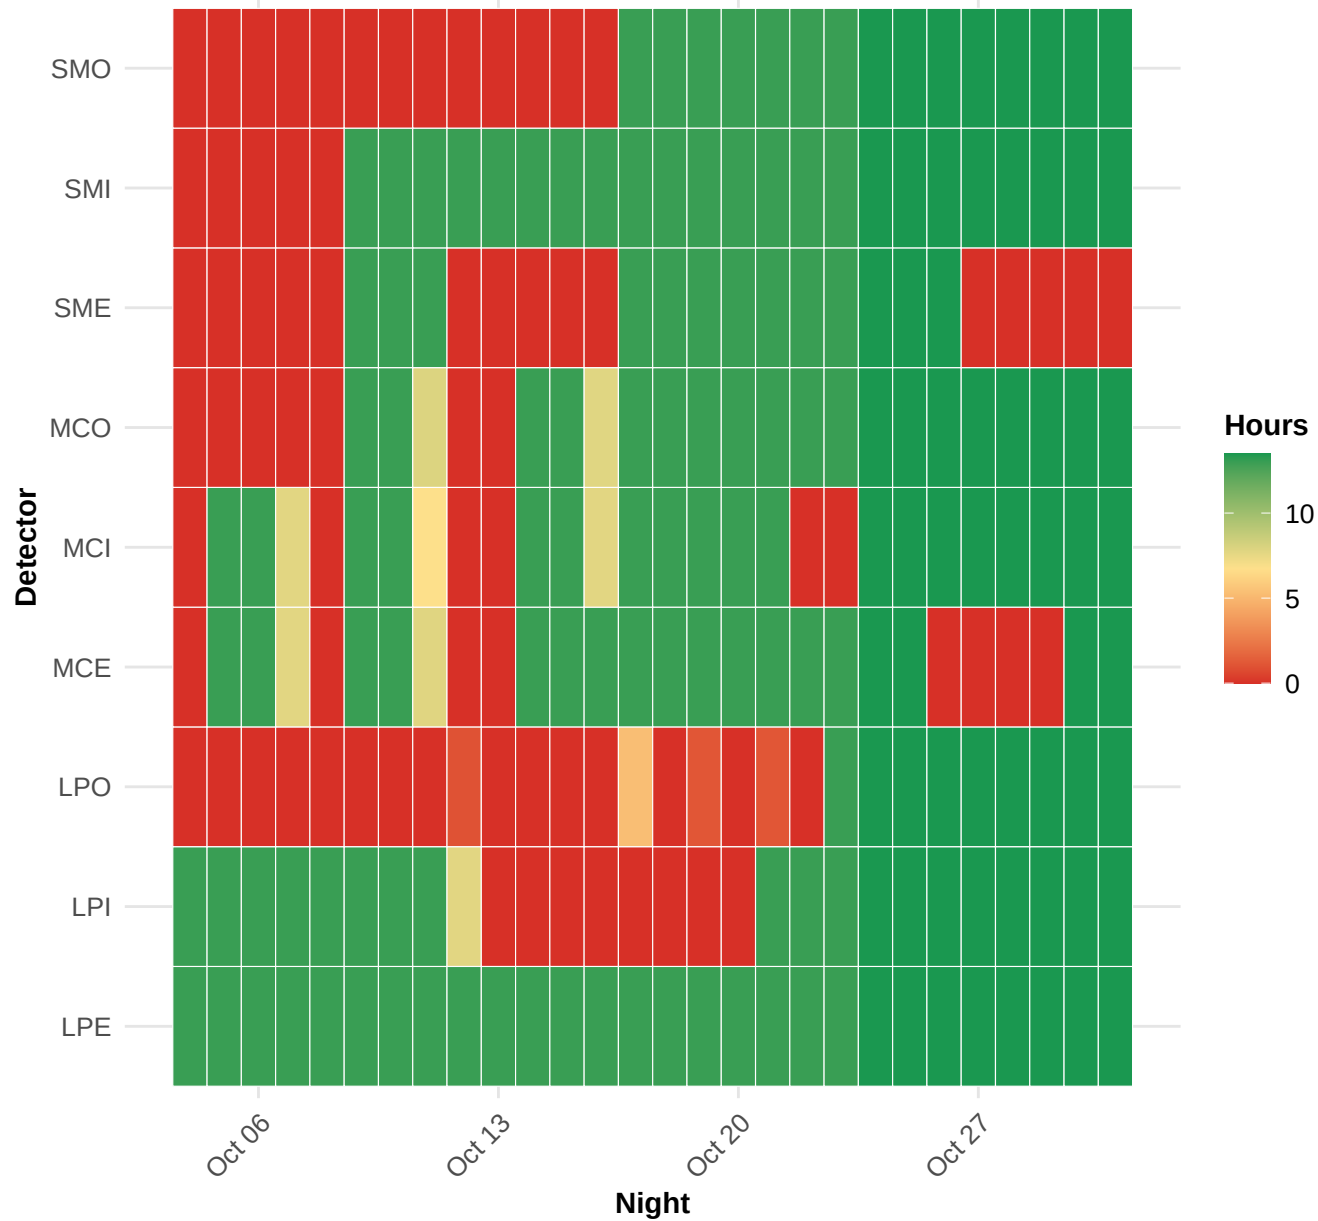

Missing Recording Nights by Detector

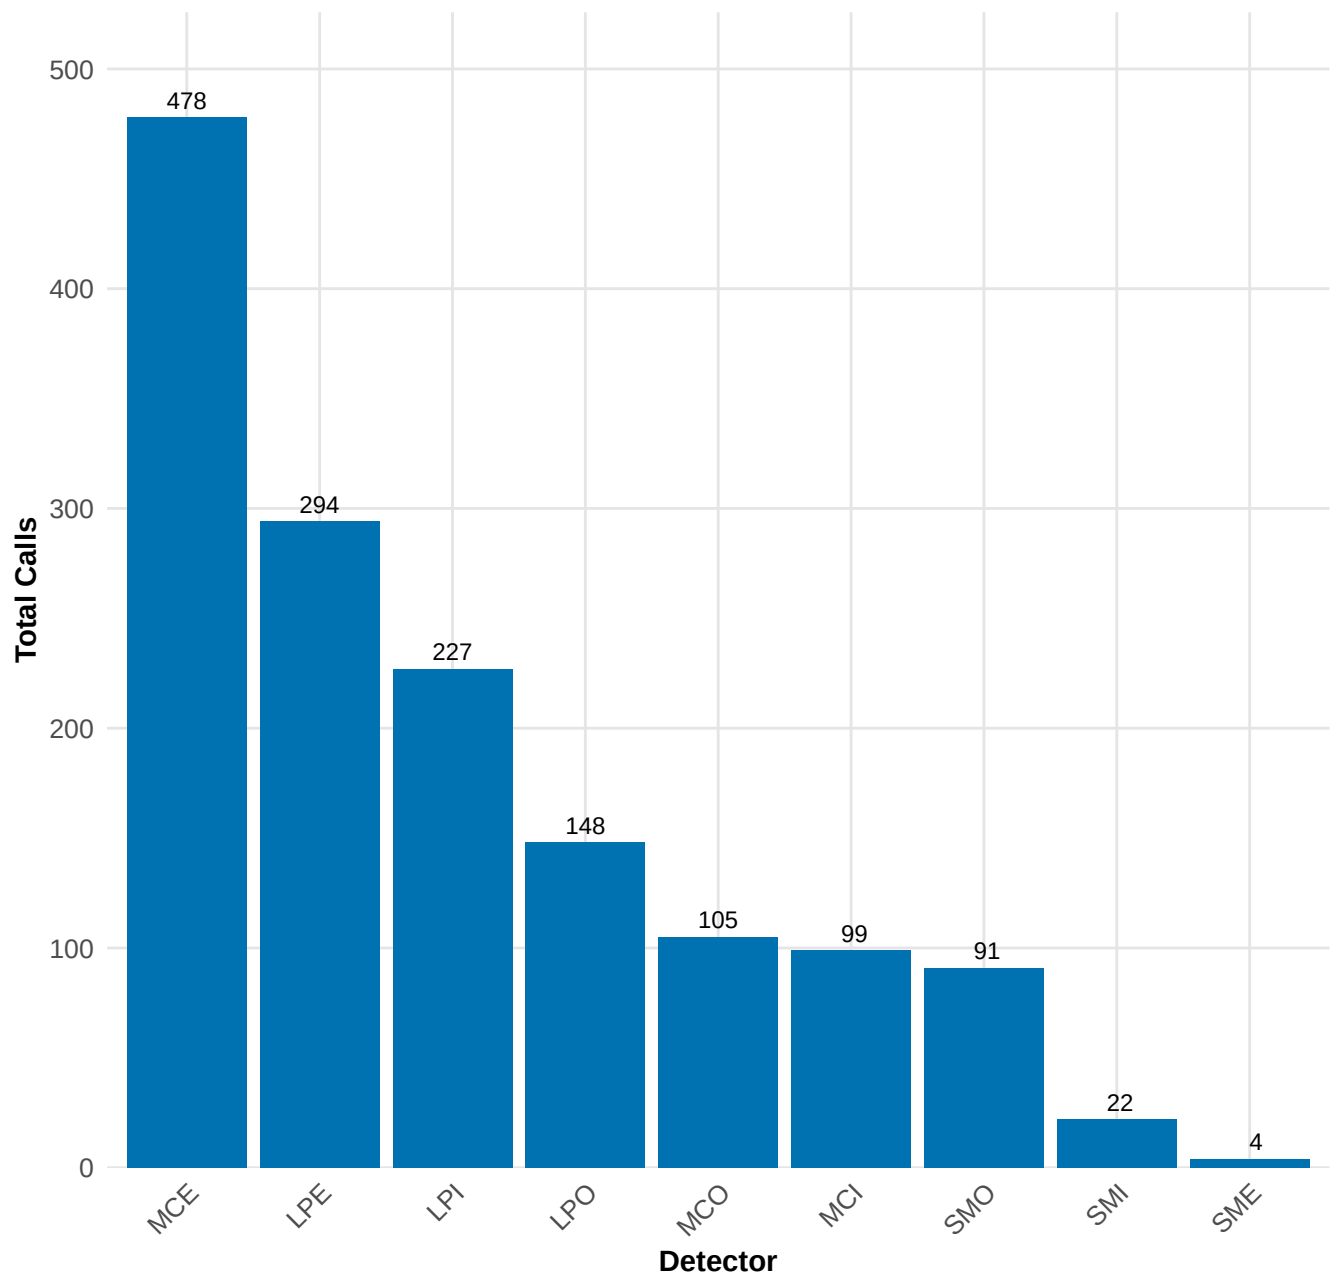

Expected: 28 nights per detector

Gray = no data; darker = more recording hours

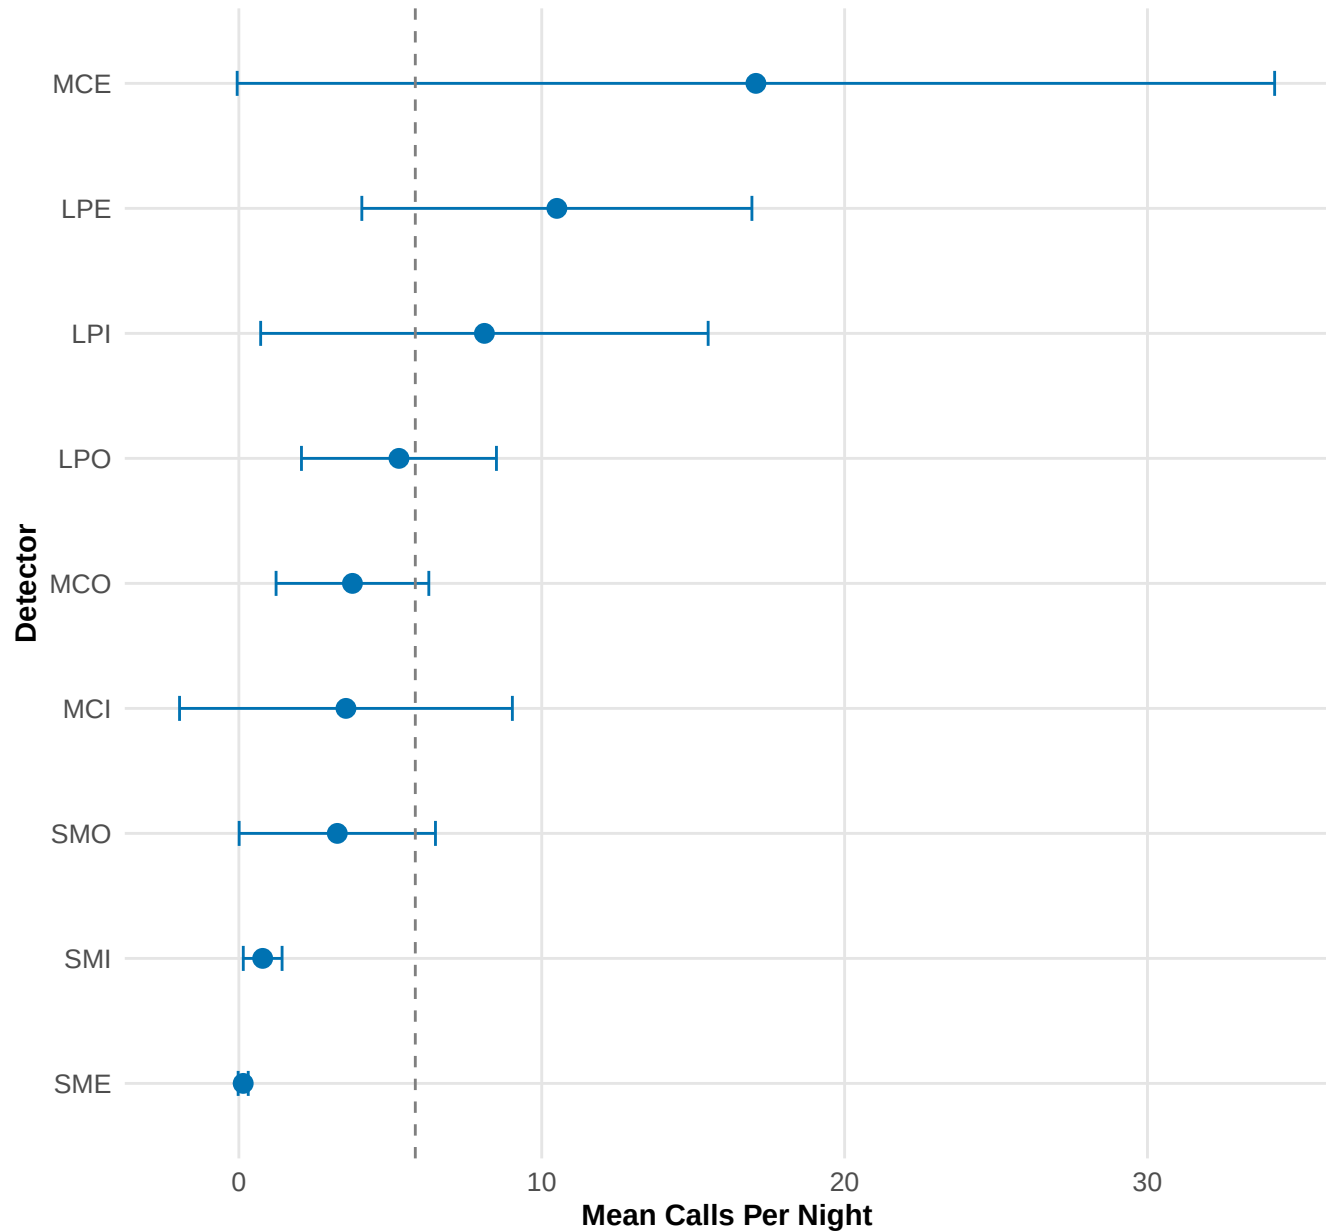

Total Bat Calls by Detector

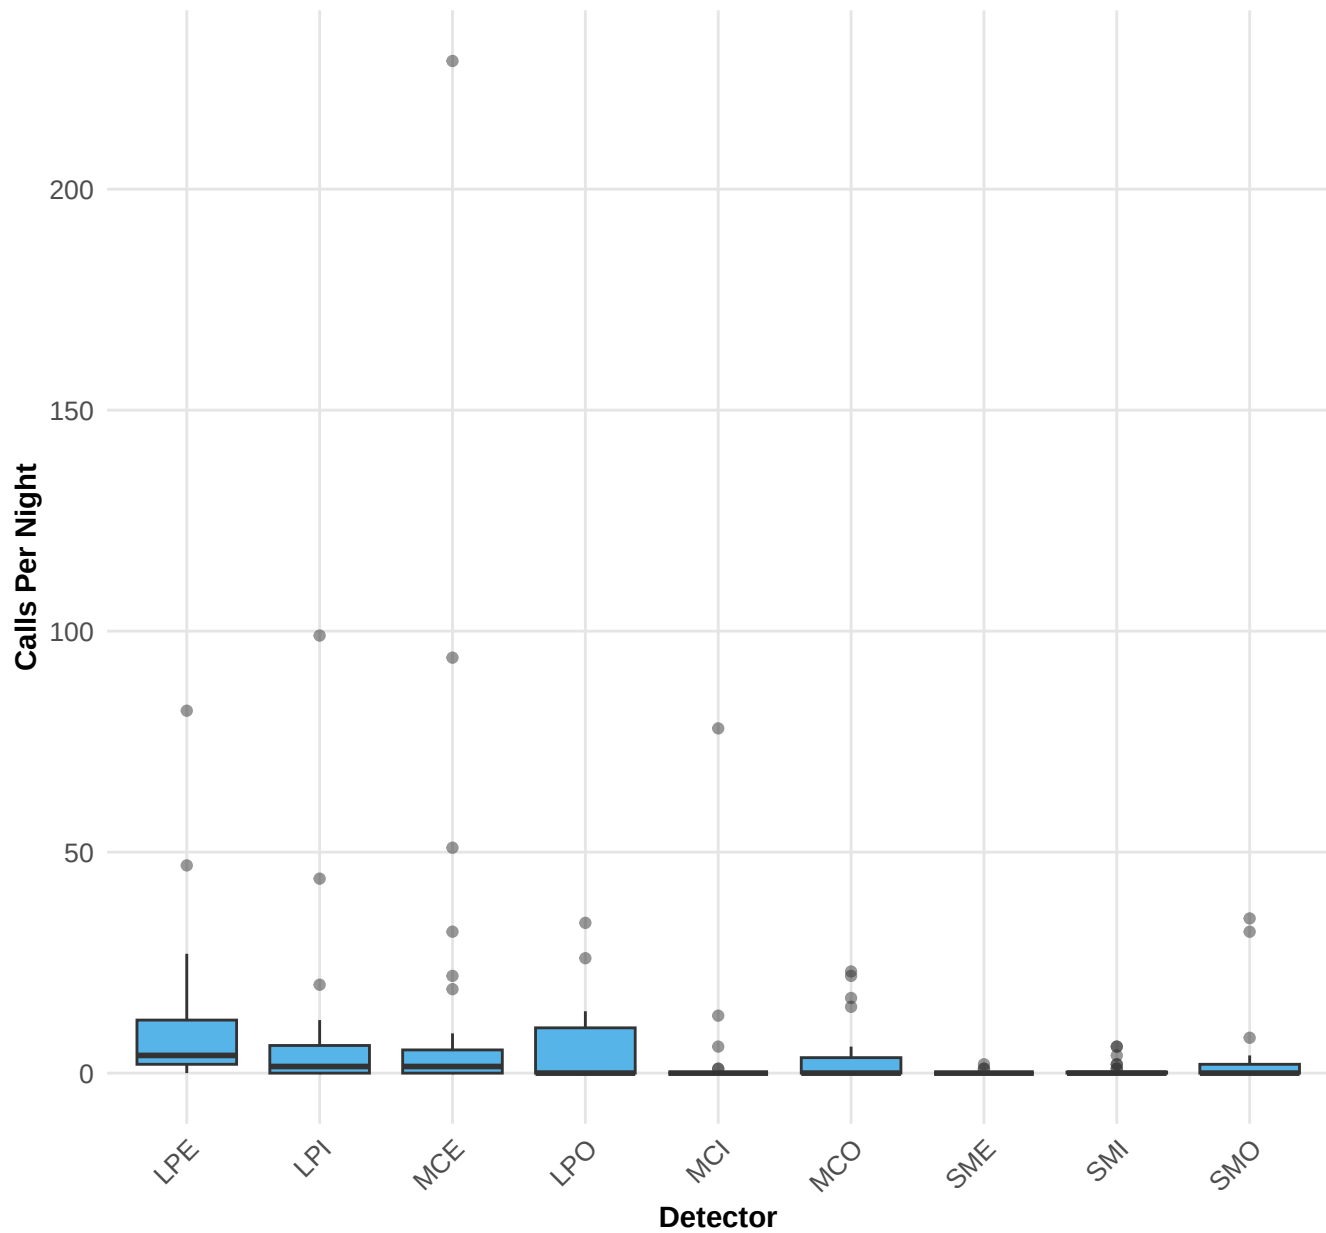

Relative Detector Activity

Mean calls per night $\pm$ 95% CI (descriptive)

Distribution of Nightly Activity by Detector

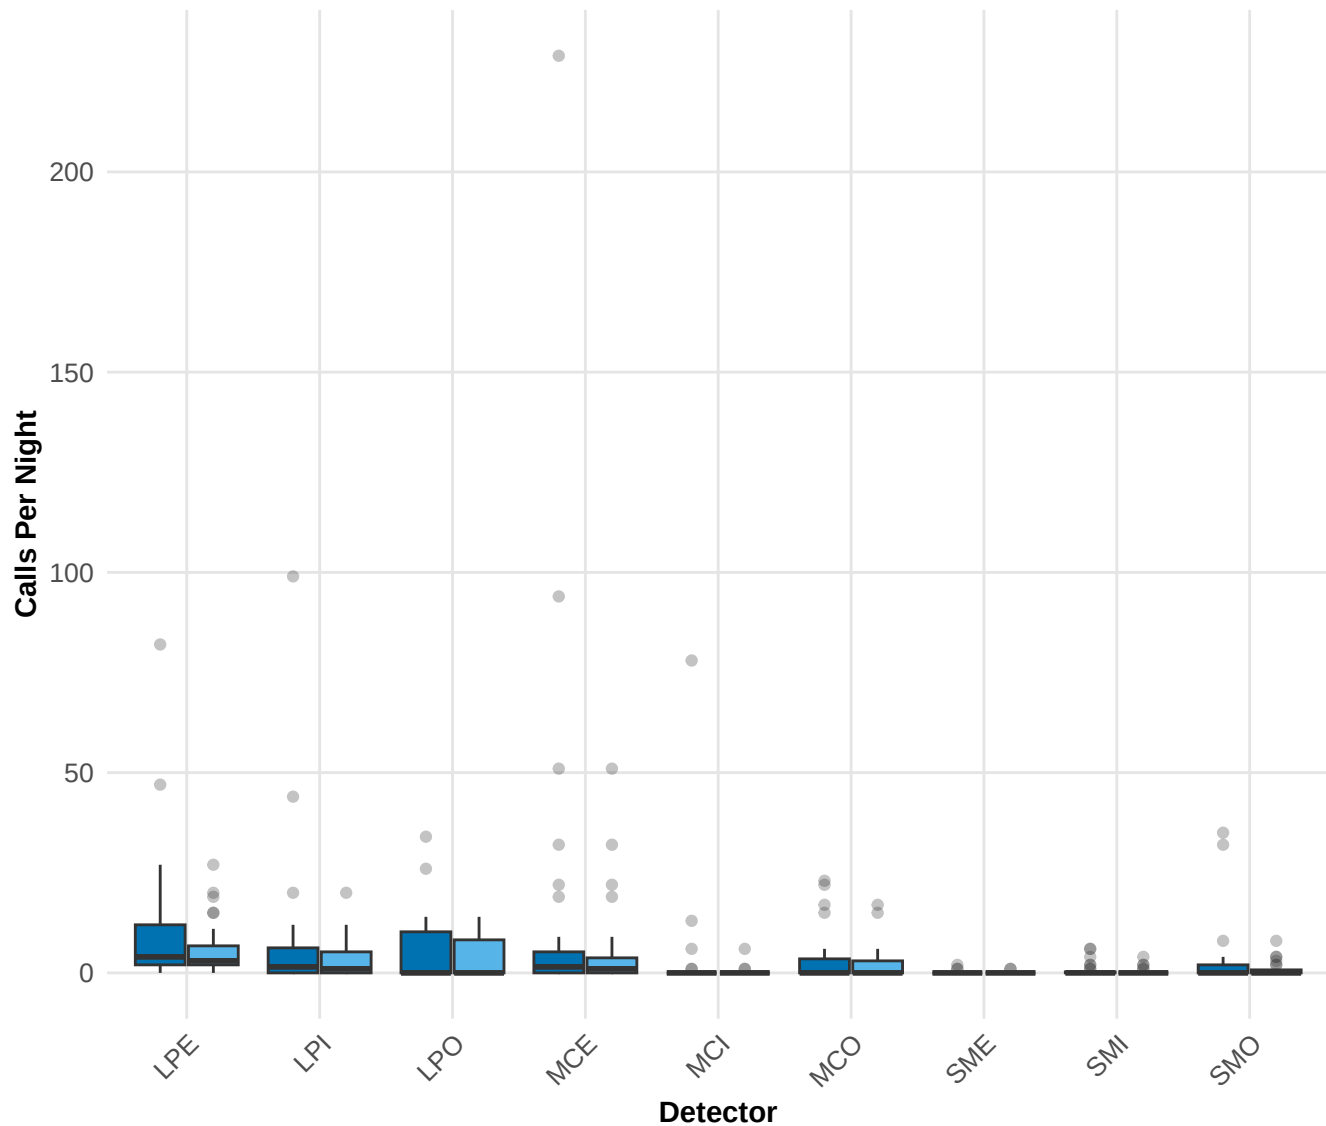

Ordered by median calls per night

Effect of Outlier Removal on Activity Distributions

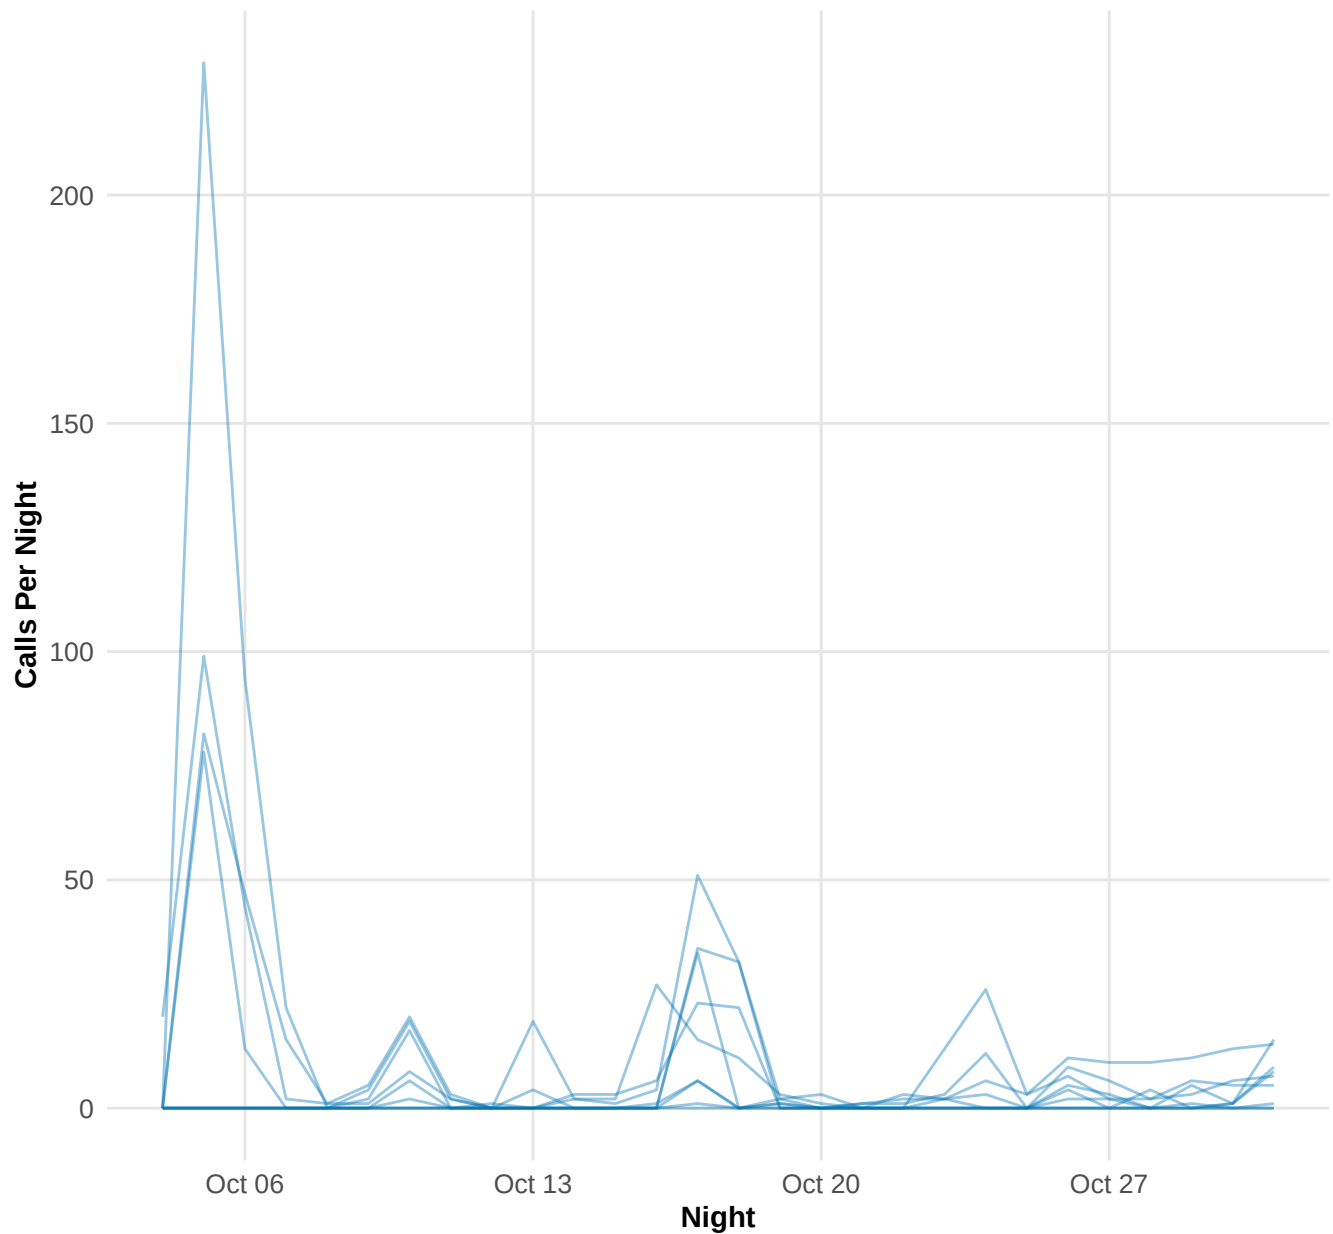

17 outlier nights removed (>95th percentile per detector)

 All Data  Without Outliers (>95th %ile)

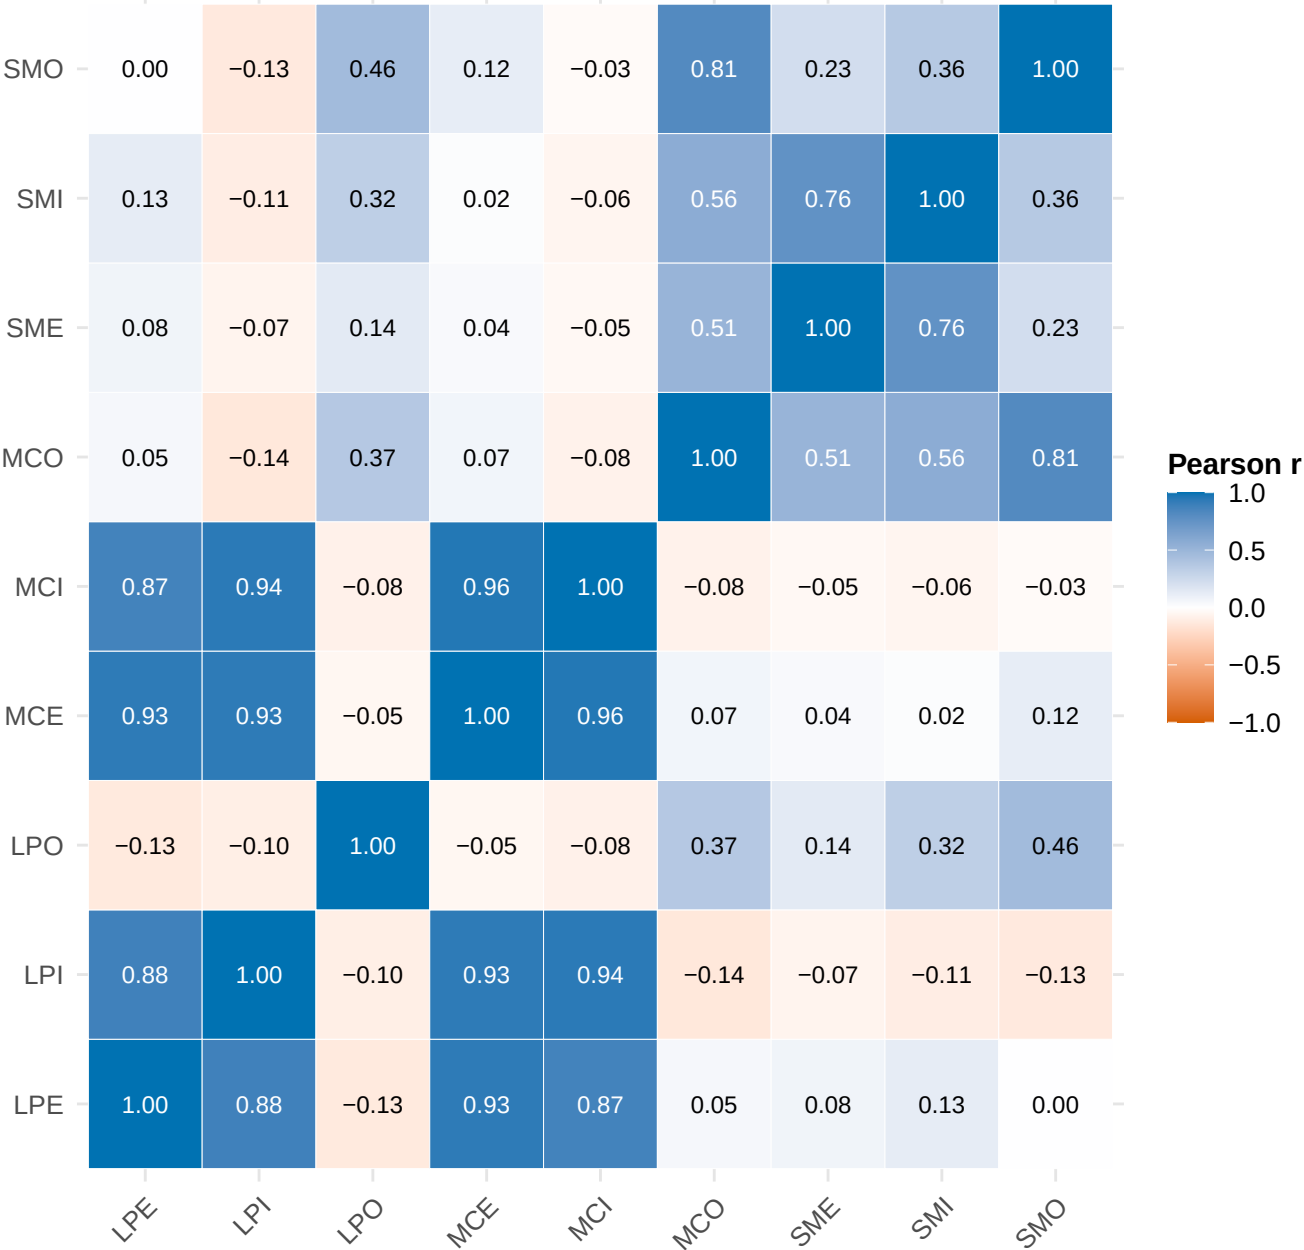

Synchrony of Bat Activity Across Detectors

Overlapping patterns suggest shared environmental drivers

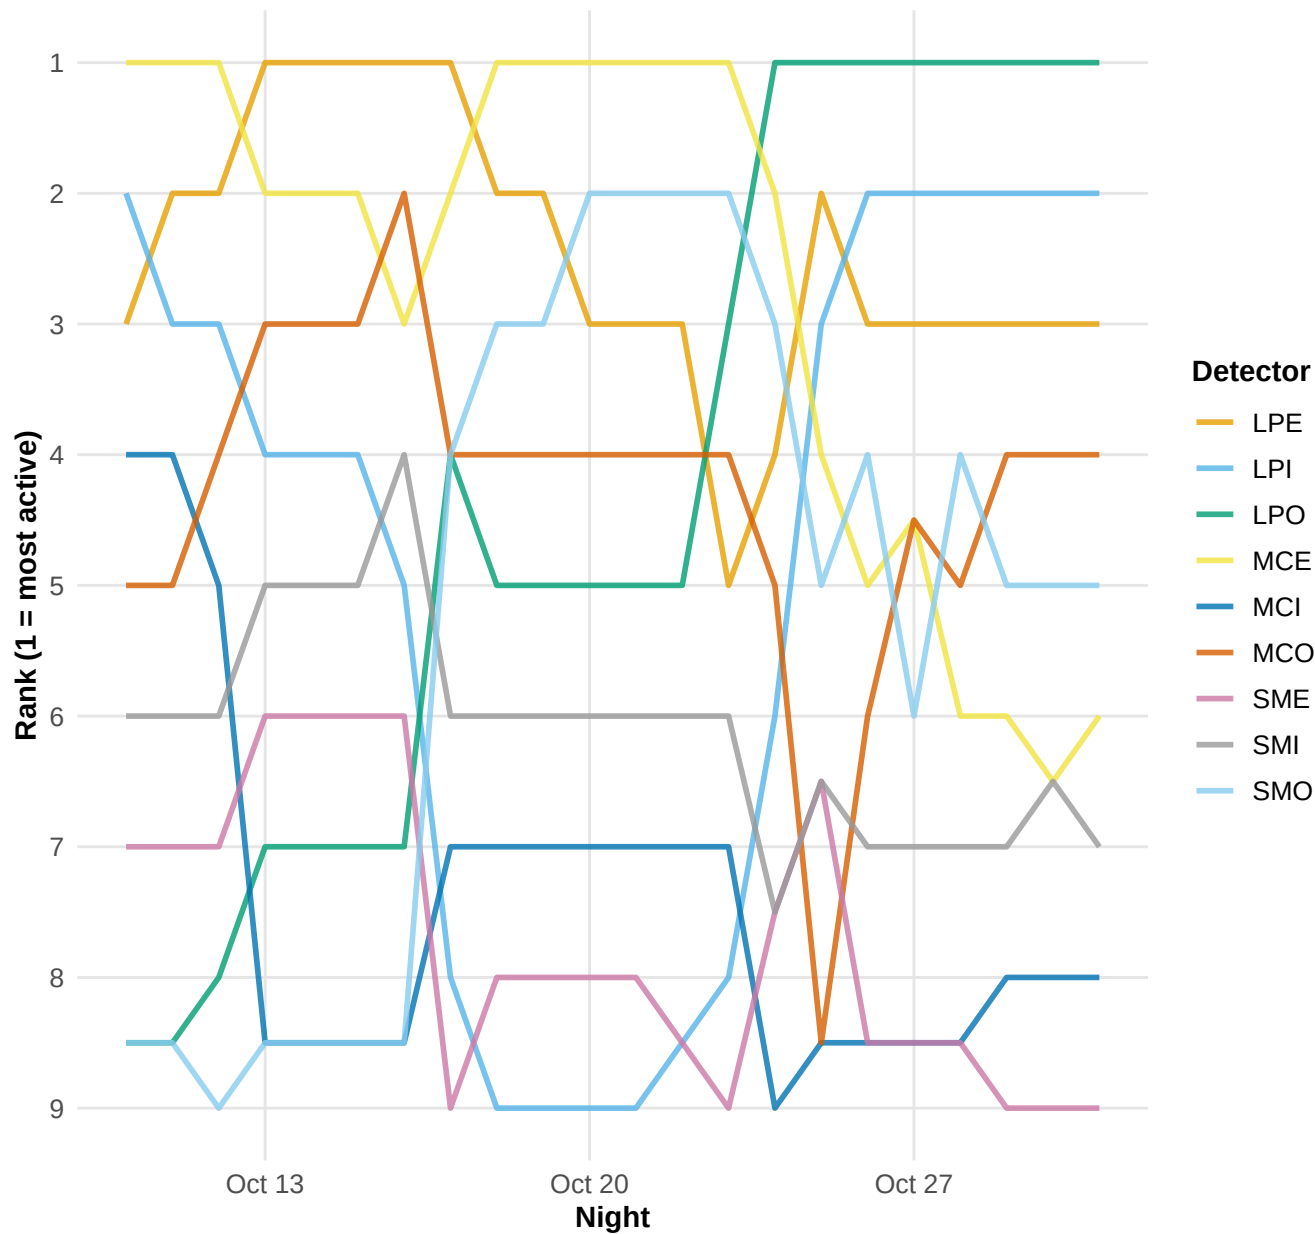

Correlation of Nightly Activity Between Detectors

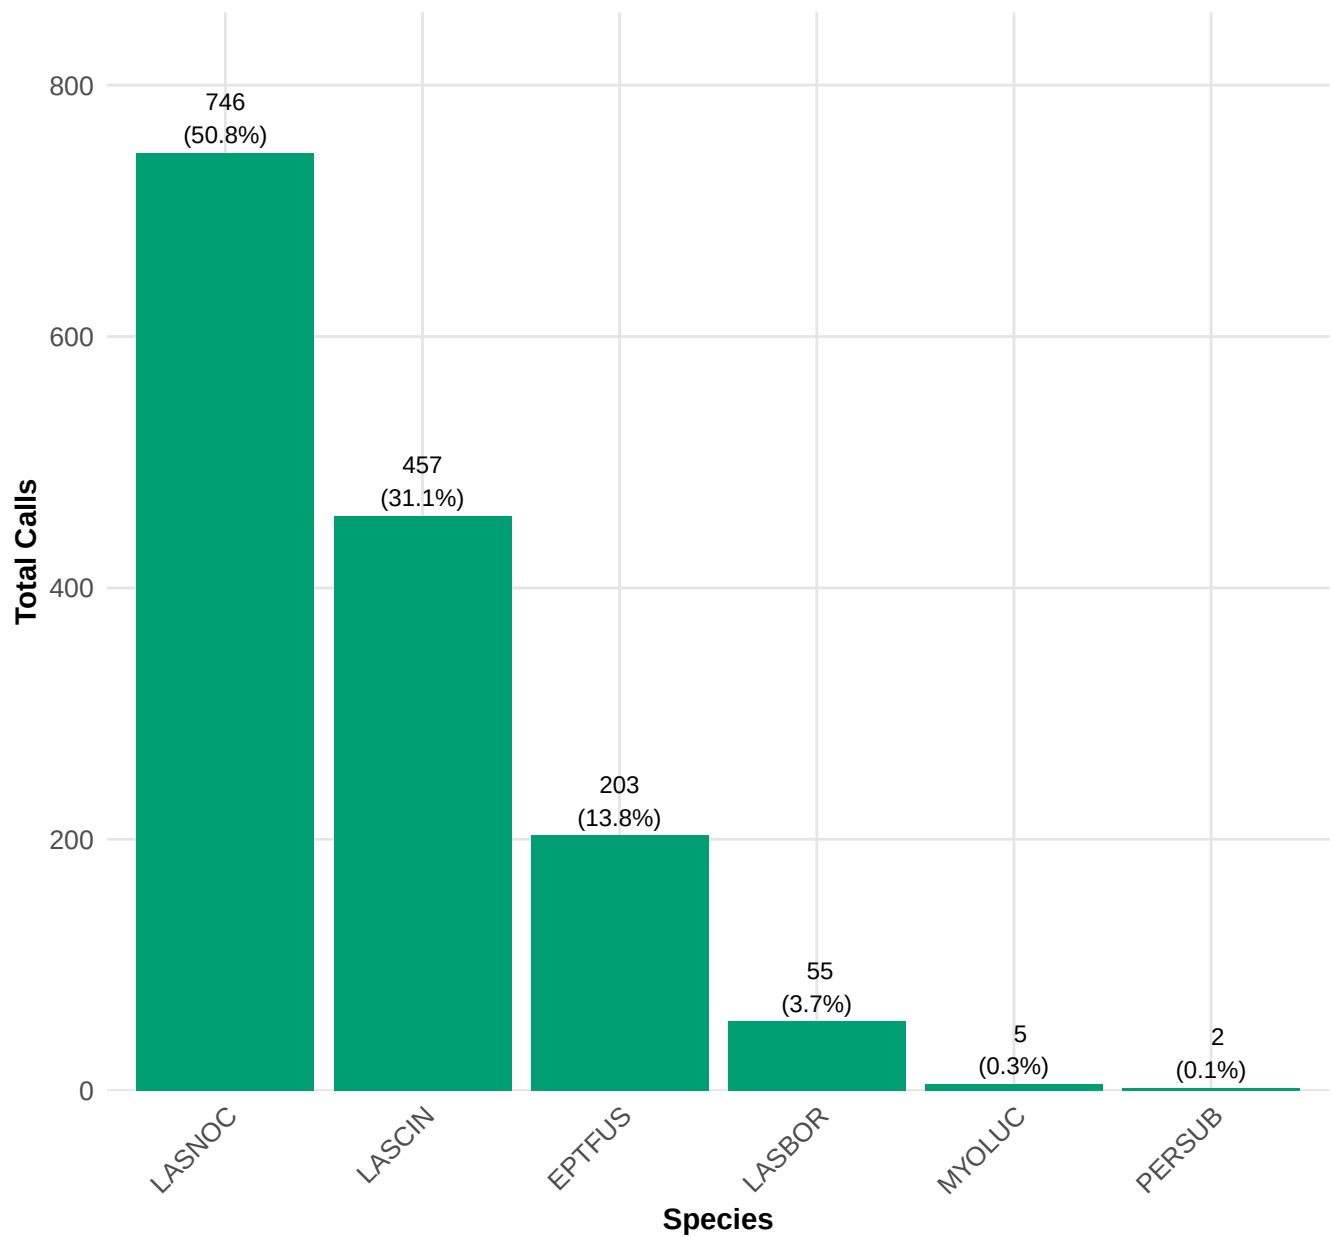

Detector Activity Rankings Over Time

7-day rolling average

Species Composition

Total: 1,468 calls

Species Accumulation Curve

Cumulative species detected over study period

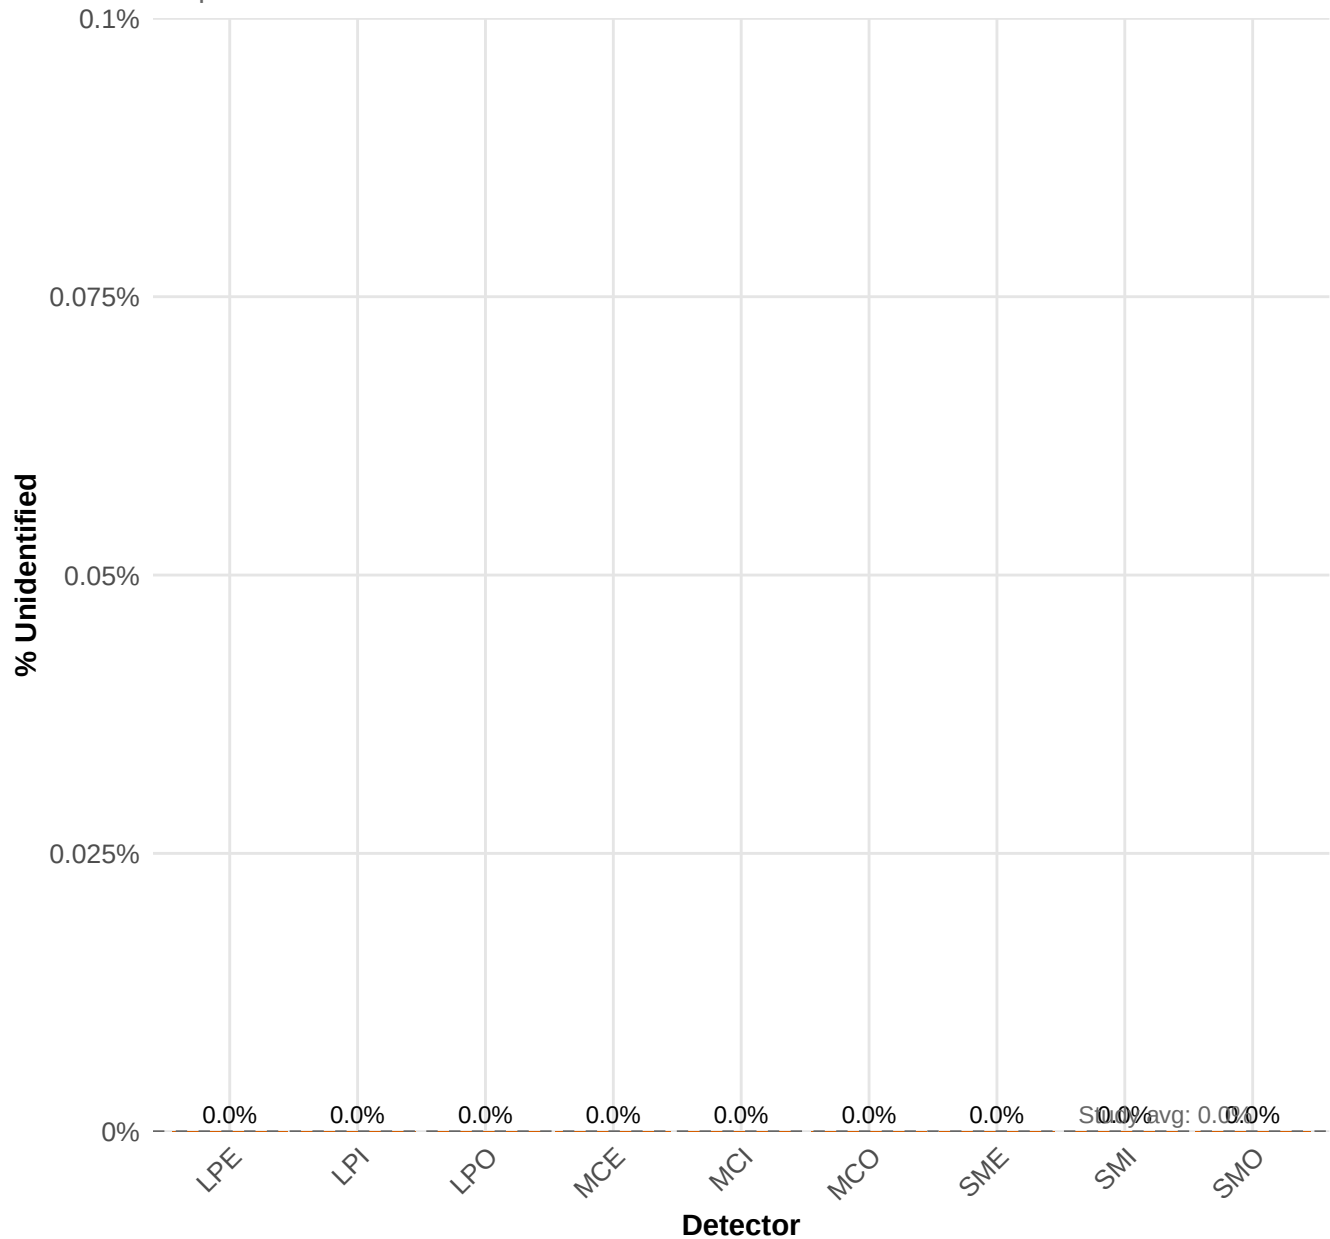

Hourly Activity by Species

Top 6 species by total calls

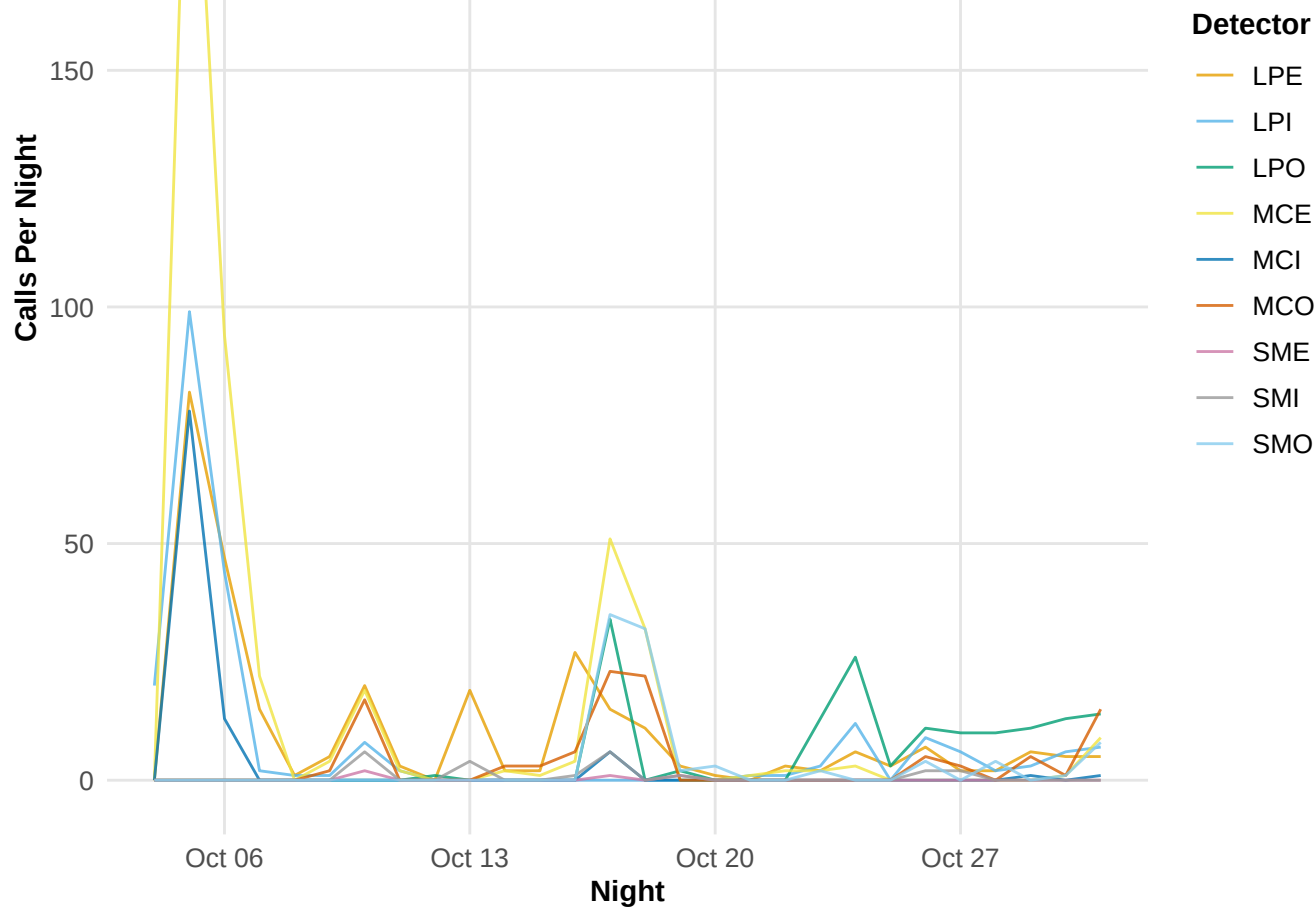

Unidentified Calls by Detector

Proportion of NoID/Unknown calls

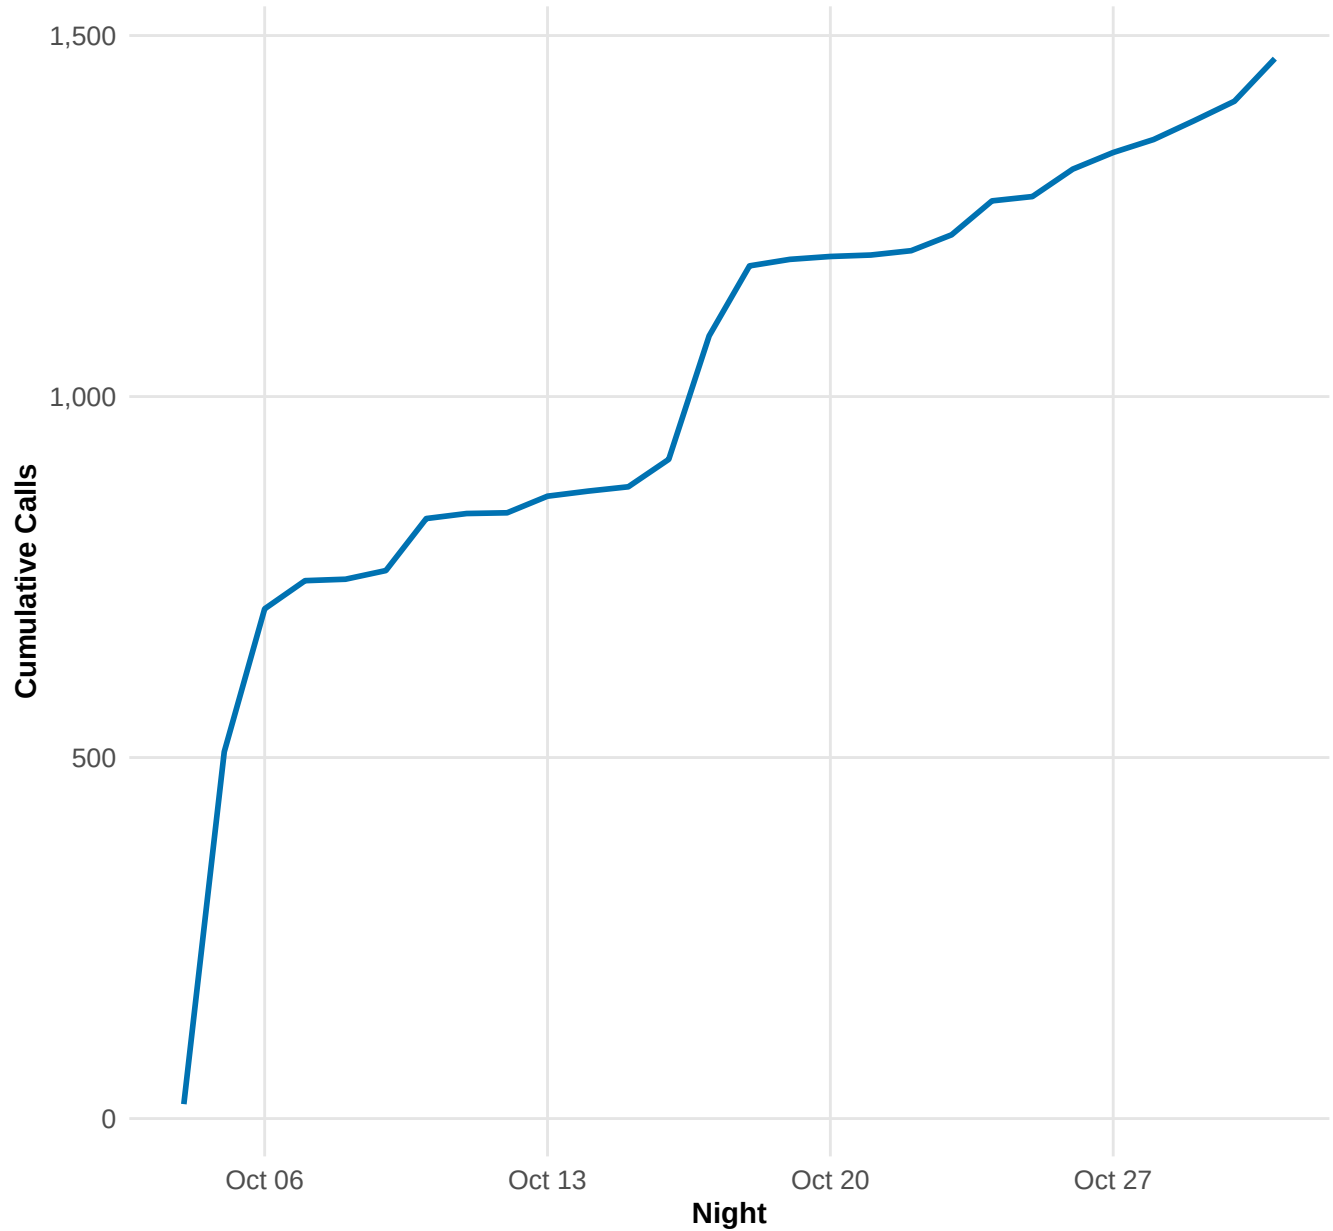

Bat Activity Over Time

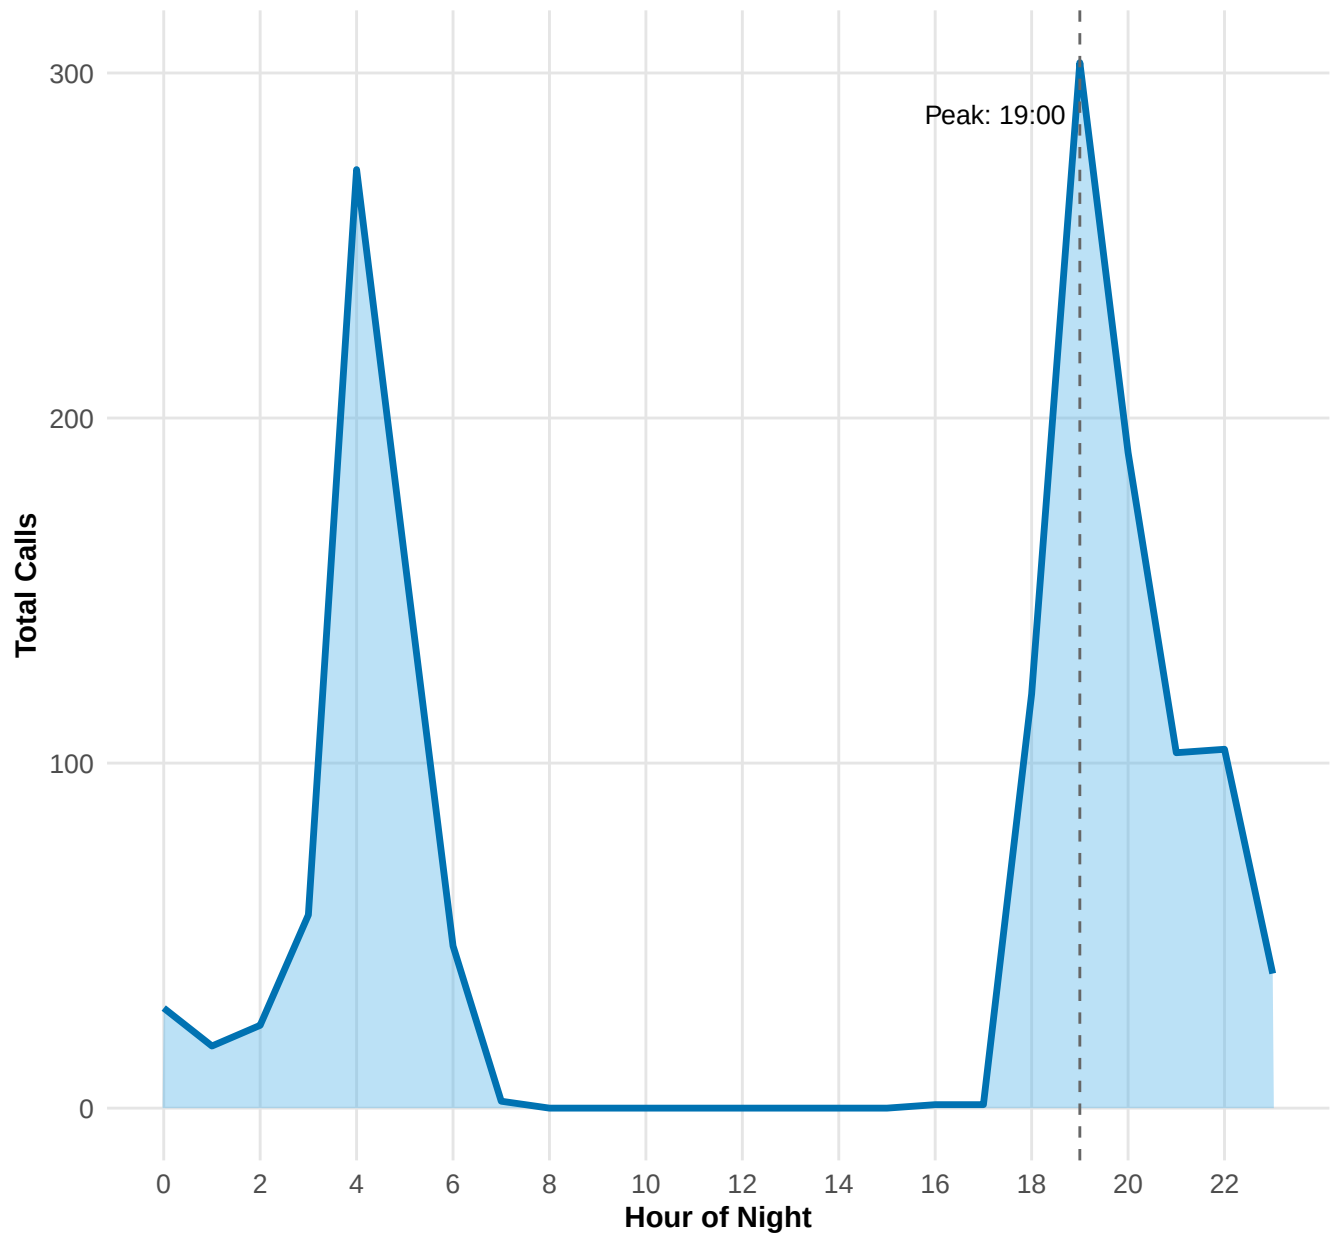

Cumulative Bat Calls Over Time

Slope indicates activity intensity

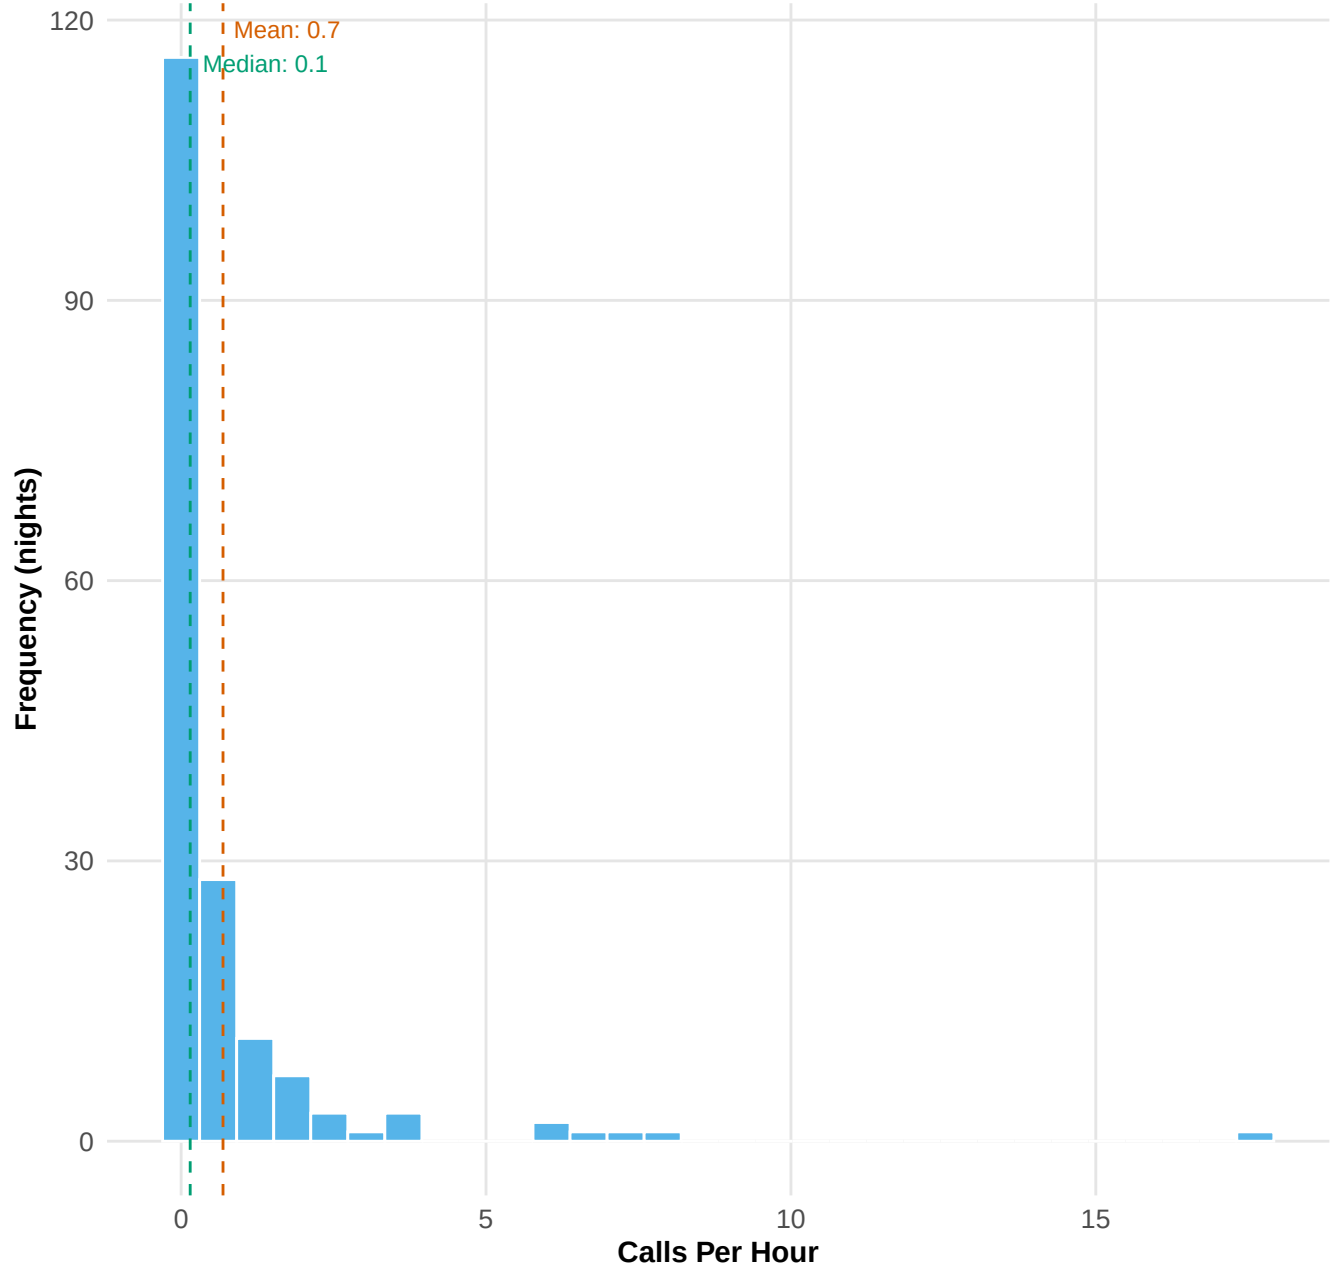

Hourly Activity Profile

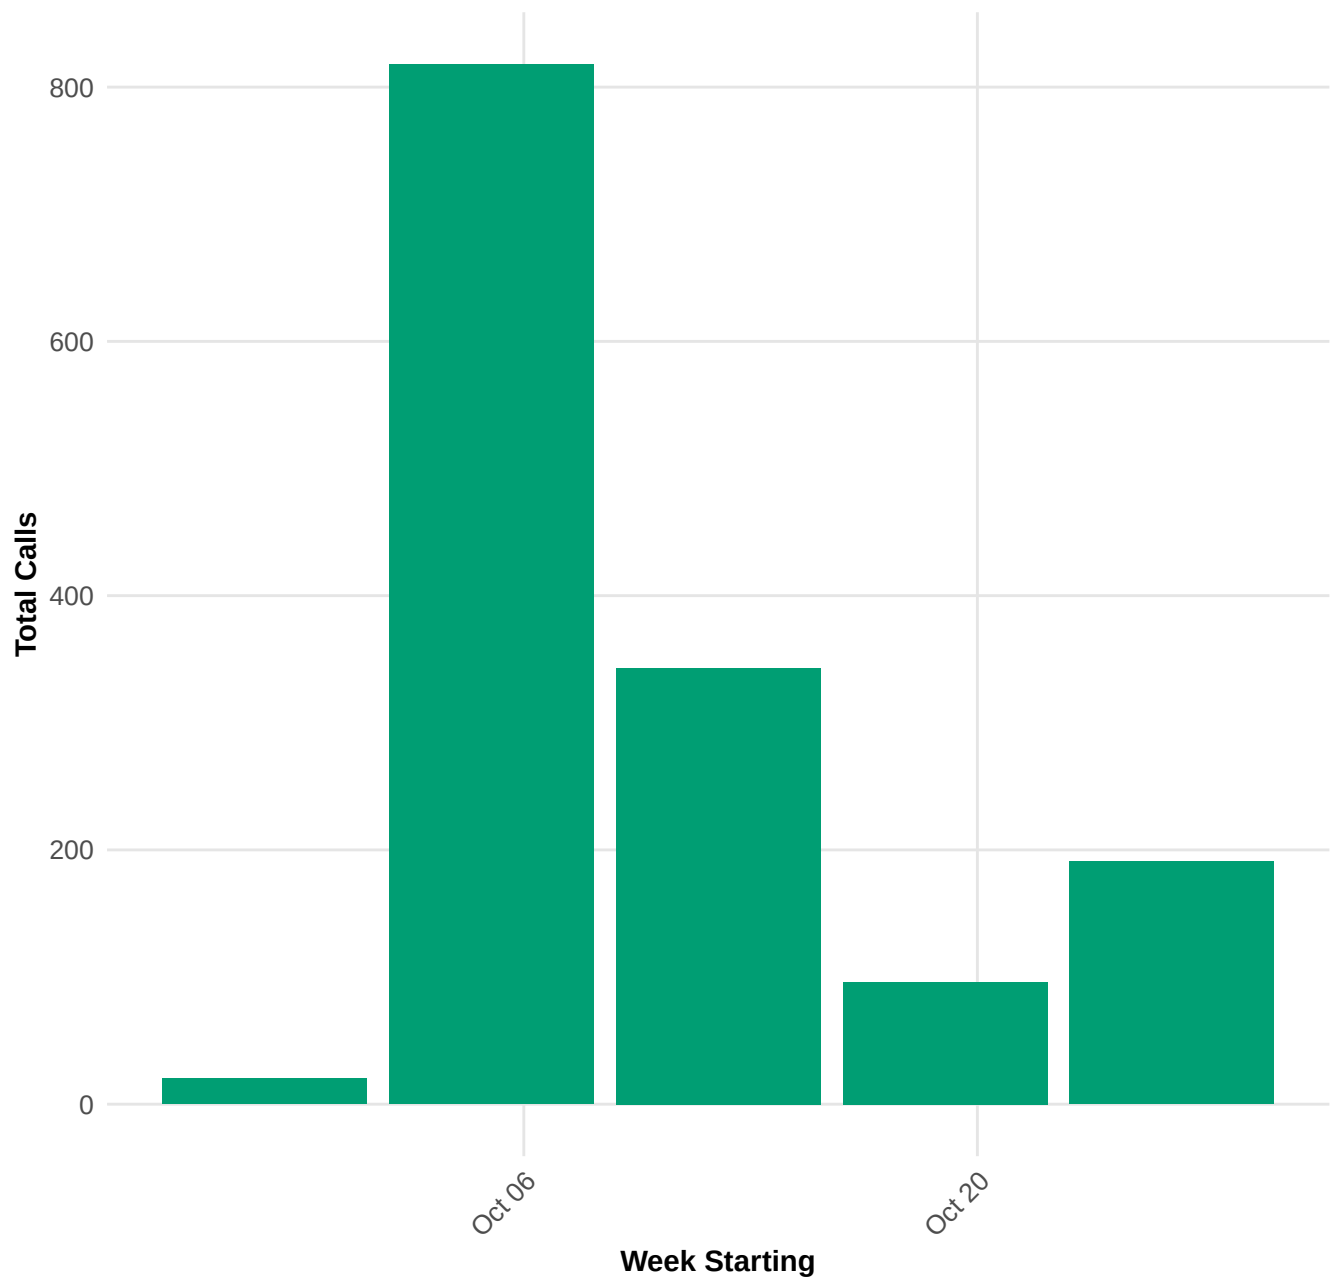

Total bat calls by hour of night

Distribution of Calls Per Hour

Weekly Bat Activity

Monthly Bat Activity
